DETAILED ACTION

Specification

1. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 3, 11-14 and 16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3 is rejected because $[(R^3+R^4+R^5)/R^2]^4$ is not understood.

Claims 11 and 12 are rejected because the language "an effective amount is indefinite."

Claim 14 is rejected because the language "the use as claimed" is indefinite.

Also, the language "is one obtainable by" is not positive claim language.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1, 2, 4, 6-12 and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by Balash (US 3,485,603).

Balash teaches a gasoline composition comprising the combination of an amine salt of a formaldehyde-modified unsaturated organic acid and an organic silicon compound. Examples of the silicon compound include polyhydrocarbylsiloxanes (silicones)(see abstract).

The silicones have a formula as follows

Wherein L is C₁-C₁₂ alkyl, C₆-C₁₀ aryl and n is an integer from 1 to about 20, L₁ is selected from L (see col. 2, lines 18-30). The compound of instant claim 2 is rendered obvious when y and z are 0. The acids that are neutralized contain from about 10 up to about 20 carbon atoms (see col. 3, lines 49-73). A concentrate of the additives contain the ratio of amine salt to organic silicon of from 60-95 % amine salt and from about 5-40 % organic silicon compound, or up to 200 ppm salt and up to 100 ppm silicon compound in the fuel, Balash teaches the addition of conventional additives (see col. 7, lines 47-58; col. 6, lines 1-13; claim 1). Since Balash teaches the same additive as that of the claims, Balash would inherently meet the limitations of claims 8-10.

Accordingly, Balash teaching all the limitations of the claims anticipates the claims.

6. Claims 5, 17 and 18 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of

the base claim and any intervening claims. The prior art fails to teach or suggest the salt and the fuels in combination with the siloxane.
